

bag2zero

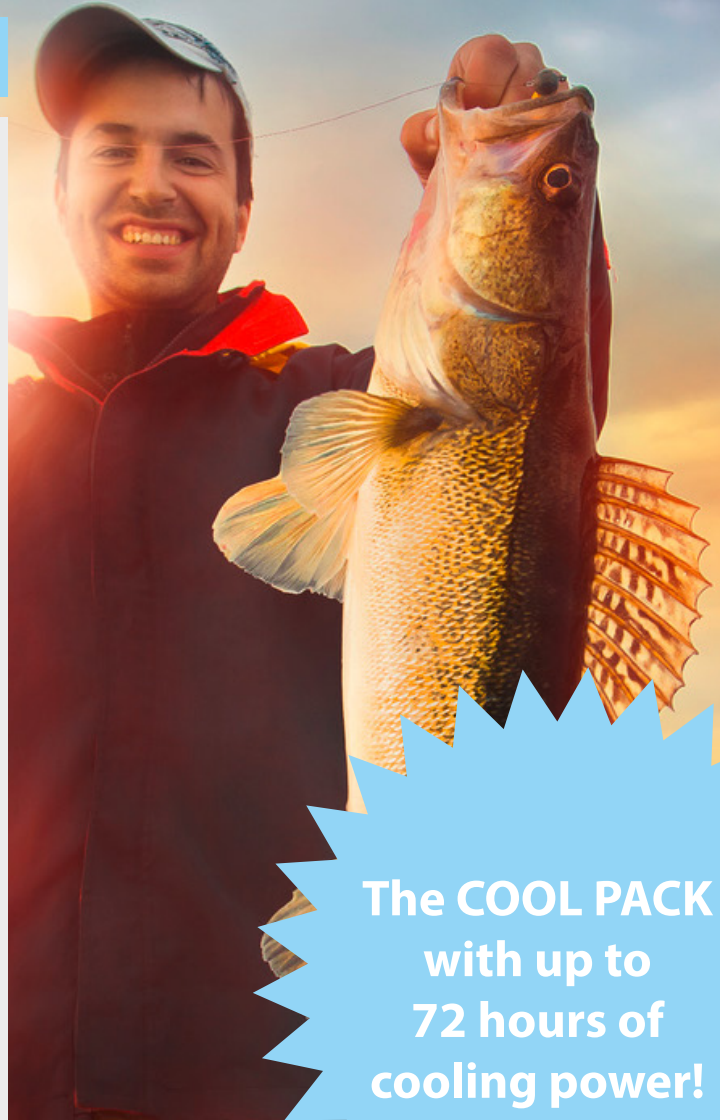

bag2zero is a cool pack which can keep temperatures at freezing point and even up to -16° degrees Celsius for a period of almost 72 hours in an isolated environment. Its composition is entirely non toxic which makes it ideal for cooling all types of foods. The gel-style cooler batteries are very robust, light to transport, environmentally friendly and can be used for 5 years.

bag2zero is available in two sizes with a weight of 0.9 kg (Size S) and 2.3 kg (Size L) which makes it perfect for leisure use. Regardless of whether on a boat trip, at a festival or on a trekking tour where every kilo counts: with bag2zero you can put together your own customized cooling system. With a particular number of cool packs you can even freeze products.

The bag2zero cool pads from B&W International are available from specialist retailers or direct online
